Barriers of communication

Barriers of communication: Language Barriers

Because language is the most often used medium of communication, it is one of the most significant hurdles to efficient communication. Each major region has its own language, and dialects between regions can differ by a few kilometres, and even a thick dialect can make communication difficult. Diverse employees will have different linguistic skills even in the same workplace, and as a result, communication channels that transcend the corporation will be affected. Even when communicating in the same language, a message's terminology can be a barrier if it is not fully understood by the receiver(s), who is unfamiliar with the terminology.

Regional idioms and expressions may be misinterpreted or even offensive to some people.

Barriers of communication: Psychological Barriers

There are a variety of mental and psychological issues that can obstruct effective communication, such as stage fright, speech disorders, phobias, depression, and so on. Anger, fear, jealousy, insecurity, shyness, and close-mindedness are all psychological barriers that can obstruct communication. All of these conditions are difficult to manage at times and will obstruct communication.

However, it is possible that some people have a propensity of initiating an argument when someone disagrees with them, which can have a negative impact on both personal and professional relationships.

Barriers of communication: Emotional Barriers

The ease and comfort with which a person can speak is determined by their emotional IQ, and a person who is emotionally mature will be able to communicate effectively. However, it is often obvious that those who let their emotions rule their lives will experience issues.

For efficient communication, a perfect blend of emotions and facts is required, and emotions such as anger, irritation, and humour can cloud a person's decision-making abilities, limiting the efficiency of their communication.

Barriers of communication: Cultural Barriers

As the world becomes more globalised, any major office may contain people from many corners of the globe, and different cultures have varied interpretations of some core societal norms. From one culture to the next, clothing, religions (or lack thereof), food, drinks, pets, and general behaviour will differ dramatically.

As a result, we must take into account these various cultures while communicating and cultivating cross-cultural sensitivity in order to overcome such cultural obstacles. This is referred
to as being culturally acceptable, as people and businesses frequently miss out on these chances owing to cultural obstacles.

**Barriers of communication: Physical Barriers**

They are the most evident impediments to successful communication, and they are usually easily removed in concept at least, such as noise, closed doors, malfunctioning communication equipment, closed cabins, and so on. For example, in a large office, physical separation between employees, combined with faulty equipment, can create significant communication barriers.

**Barriers of communication: Attitude Barriers**

Communication is also hampered by prejudice, distrust, emotional aggression, or discrimination based on gender, ethnicity, or religion. They arise as a result of a lack of drive or a refusal to adapt. Effective listening, criticism, problem-solving, and being open to change can all help you break down communication barriers.

Certain people, such as introverts or persons who are not very sociable, prefer to be left alone, whilst others want to be social or occasionally overly clinging. Some people have attitude problems, such as a large ego and disrespectful behaviour, which can be a communication obstacle.

**Barriers of communication: Perception Barriers**

Different people view the same things in different ways, which is something we must keep in mind when communicating. Effective communication requires an understanding of the audience's perception levels, and all messages or communications must be simple and straightforward. There should be no place for a diverse set of interpretations.

**Barriers of communication: Physiological Barriers**

Certain ailments, diseases, or other limits may also obstruct good communication between an organization's multiple channels, with the shrillness of voice, dyslexia, and other physiological barriers to successful communication being examples. These aren't critical, though, because they can be readily adjusted for and deleted.

**Barriers of communication: Hierarchical Barriers**

Organizational hierarchy can be a difficult communication barrier, and it can also exist inside a family, where there may be a power hierarchy, resulting in a lack of transparency or a communication barrier. Establishing a transparent discussion with the appropriate persons is the solution.
