

# Chalk Activity

CHILD-LED  
ACTIVITY

## Objectives

- To strengthen little fingers and hands
- To develop sensorial skills
- To enhance hand-eye coordination

## Materials Needed

- Child-safe dustfree chalk, black chart paper, a bowl, a piece of sponge, a plastic mat

## Instructions

- Lay out the plastic mat on the table. Give the child the thick black chart paper. If you have an easel at home, you may set it up and put the black paper on that.
- Place the chalk on the mat and allow the child to doodle/scribble on the black chart paper or a rough surface where the markings are visible to the child. Keep a small bowl of water and observe what the child does with the sponge.

### Playing Tips:

- Dear parent, at a little distance you can also create a similar setup and make doodles and use the wet sponge to erase and make new markings. The child will pick cues and try to do the same.
- You can pretend to make webs by making twirls and scribbles to represent webs. Do not draw perfect webs. Avoid doing anything in the child's space.
