

SankalpTaru launches its new website with all new plantation features

To make virtual tree plantation much more easier and interesting, SankalpTaru revamped its web portal and has launched a fresh new website. Our new website not only has intriguing user interface, but provides several new plantation features as well. Now, with SankalpTaru, one can not only plant trees across the lengths and breadths of India but can even root trees for upcoming festivals and please their Gods through greenery.

**Hurray! Our new website is live now.
Explore a new world of online plantation with us.**

The screenshot shows the homepage of the SankalpTaru website. At the top, there is a navigation bar with the SankalpTaru.org logo on the left and links for 'How it works', 'For Corporates', 'About Us', 'Our Work', and 'Forest'. A prominent green button labeled 'Plant now' is on the right, along with icons for 'Account', 'Cart', and 'Menu'. The main content area features a large background image of children in school uniforms holding up oranges. A white overlay box on the left contains a tree icon, the number '7,94,558', and the text 'Healthy trees planted & survived'. Below this, there are two bullet points: 'Planting 500+ fruit, medicinal and fodder species' and 'Maintaining a healthy tree survival rate of >95% even at desert regions'. A green 'Plant now' button is at the bottom of the overlay. At the bottom of the page, there are three circular icons: a person, a tree, and a map of India.

Winter storage comes to an end in Leh Ladakh

The heavy winters and over flow of snow in the mountains of Leh Ladakh are a true stumbling block for plantations in this region. Thus, we usually store our saplings in bunkers during the extreme winter months in Ladakh, so as to preserve the plants. Now finally as the prolonged winters are relieving, our healthy saplings of Apple and Apricots are being taken out to resume plantations in this cold desert. Soon the several village clusters of Ladakh would be rejuvenated with a dense cover of trees. Here we come greenery!

Few more Mango trees for Telangana

Noble Art & Craft House collaborated with us to contribute their share towards Mother Nature by rejuvenating it through healthy trees. As a green intent, 500 Mango saplings were rooted on behalf of Noble Art on a woman farmer's land in Raghavapur village of Jangaon district, Telangana. Through these fruit-bearing trees, the aim is to empower the associated woman beneficiary with strengthened livelihood and a more reliable source of income. The green contribution has efficiently helped Noble Art team to reduce their carbon footprints, while also motivating them to plant more trees in nearing future.

Healthy West Bengal with our healthy-happy trees

As a major agricultural producer, West Bengal is said to have good farming interventions, despite which the state's marginal farmers do not receive a sufficient return over their crops due to low selling prices. SankalpTaru initiated Project Shyamolima during April, 2018 with a pledge to promote biodiversity in the state through development of a sustainable plantation program. Over a year, our several Mango and Guava saplings planted in Bankura district have started blooming well with a healthy tree survival rate of more than 95%. Our huge shout-out to the associated diligent farmer beneficiaries for their green passion.

Beneficiary of the month

Here's another bunch of super passionate residents who are the proud beneficiaries of the trees they have planted in their society. These natives of Ozone Glitter Society in Ahmedabad, Gujarat are developing a lush green dwelling for their kids. They treat each plant as a member of their families and certainly, their efforts towards nurturing greenery is worth commending. They surely can imagine the healthy and fresh paradise they are creating!
