

We planted with Indian Army in Leh Ladakh

At an altitude of 3,500 m, SankalpTaru team planted warriors for the warriors of our nation. We planted a total of 1,000 saplings of Poplar and Selex at Indo-China border in Nyoma village of Leh Ladakh. Executed with the support and participation of our super-enthusiastic Indian army, the initiative aims towards generating oxygen for these heroes at an incredible height. With time, as the trees would get covered with bright green leaves, they would develop a healthy abode for the soldiers, while creating a self-sustainable and biodiverse ecosystem in this cold desert.

Plant A Life campaign is beating pollution in Indian cities

During the monsoon of 2017, SankalpTaru and Kotak Life Insurance together initiated a green journey under the aegis of 'Plant A Life' campaign. The program was executed in two phases, observing a total plantation of 18,200 saplings in cities of Delhi, Mumbai, Pune, Hyderabad, Kolkata, Bangalore, Surat and Ahmedabad. Over time, as SankalpTaru city coordinators and the residents at respective plantation locations nurtured the saplings with sheer affection, the plants have started transforming to healthy flourishing trees. On our recent update visit at all the locations, we were extremely delighted to observe a tree survival rate of more than 95%. Certainly, our trees are not only strengthening the green cover of India's most polluted cities, but also reducing the associated health risks by purifying atmosphere.

We are fighting forest-fires in Uttarakhand Himalayas

Recurrent forest-fires have become a major challenge in Uttarakhand Himalayas, where protecting the greenery is the biggest responsibility. In order to preserve the trees in and around Tehri district, we have made a forest-fire patrolling team, comprising of enthusiastic villagers and school students who have been distributed whistles and binoculars to aware the locals in case any forest fire occurs or is even sensed to happen. Regardless of how aggressive the blaze is, our forest-fire patrolling team is 24x7 on their toes to protect the greenery of Uttarakhand Himalayas and is also continuously planting new saplings. Leaving behind the fear of burn scars or any injury, our forest-fire patrollers are passionately protecting the woodland along with regularly training the villagers and school students on how such incidents can be mitigated and what measures need to be taken to preserve trees from destruction.

Laying the foundation of Project Empowering HEALTH

Project Empowering HEALTH is our Herbal & Medicinal Plantation Program initiated in collaboration with Indian Development Service (IDS), Chicago. Executed in Uttarakhand Himalayas to support livelihood of rural farmers, the plantation process has begun in the region, under which several medicinal and herbal saplings are being rooted. Under the aegis of this campaign, we solely intend to replace Pine trees with fruit and fodder bearing tree species which would not only prevent incidents of forest-fires, but will also act as an asset for the villagers. With time as the project excels in achieving its vision, it would definitely turn around to become beneficial for many.

We will restore Odisha and its greenery – Project Sabuja Odisha

Cyclone Fani has uprooted about 10 million trees and damaged more than 30% crop and several farmers' livelihood in Odisha. Thus, to mitigate this adversity and revive Odisha with healthy fruiting orchards, SankalpTaru team has taken the pledge of restoring the state's green cover under our 'Project Sabuja Odisha'. We seek contributions from each individual who is inclined towards Mother Nature. With the support of all our planters, we will soon start our operations in the state, aiming to support the rural farmers by helping them rejuvenate their destructed fields. Individuals can plant with us in Odisha through <https://urlzs.com/pyDeP> and post restoration activities get completed in the state, our team will plant the virtually rooted saplings on the lands of rural farmers to revive their livelihood.

**More than 10 million trees have been uprooted
in Odisha due to Cyclone Fani.**

Our green transformation in Leh Ladakh

During April, 2018 we planted healthy Apple saplings with energetic cops in Leh Ladakh at police check post in Khalatesy. Visiting the location exactly after a year over-rejoiced us to see the green spot being created by our trees, where the drivers driving towards Kargil or Srinagar report and relish the healthy environment.

of sleek to a leafy one, itself narrates the green saga!**

Beneficiary of the month

They say youngsters frame the future of a nation, and when we have an enthusiastic young farmer like Kiran Kumar, the future of India's agriculture is surely going to improve. Kiran is our farmer beneficiary from Chikmagalur district of Karnataka where he is pursuing his graduation and practicing farming, alongside. Inspired by his farmer parents, he too took up serving mother land by developing a lush coconut and arecanut orchard on his field. We are proud of his zeal.
